WHICH MICROS WILL SURVIVE THE HIGH STREET?

NEW computers are flooding in to the country — eight were announced in the last few days. But how many will reach the shelves of the high street stores?

W.H. Smith has already decided to add two to its range — their names are being kept quiet for now — and Boots is due to make a decision in the next few weeks.

In fact merchandise controller Stewart Binnie, who has worked at Smiths for seven years, said he was watching the performance of two of the company's present range, but for different reasons.

He wanted to see the reaction to the £110 price cut for the Commodore 64, bringing it down to £229. It could go into more stores.

And he said: "We will have to see how the Oric performs over the next two-three months — it's been rather caught short by the recent round of price cuts."

Mr Binnie pointed out: "Computers are very extravagant in their use of store space. Anything that does not perform and soon will be replaced by one that will."

Smiths at present stock the ZX81, both Spectrum models, the Commodore 64 and the Oric. In the company's three test computer stores-within-stores there will be a range of eight or nine computers.

And he believed that the ZX81, now just under £40, was well placed for Christmas, despite its black and white display: "It's great strength is that it's a good way of getting started."

Mr Binnie said Smiths

bought in detailed market research before considering which machines to consider and then took account of all the price segments.

He said: "The problem is that June and July are fallow months and these are when you have to make up your mind for Christmas."

WINDOW ON ANOTHER WORLD

NEW RELEASES

STAR JAMMER — Wiping the sweat from my brow, I searched the inky blackness, ahead for signs of enemy fighters. Though Star Jammer was the best ship in the galaxy, my dwindling energy reserves made me doubt I could reach the next stargate... (a one player arcade game requiring 1 joystick)

SUPER SKILL HANGMAN — Hangman as you've never played it before!

A vocabulary of over 1000 words, three levels of difficulty and an optional timer makes this classic word game a challenge for kids of all ages.

NIGHTFLIGHT — An accurate simulation of flying a single engine light aircraft, Nightflight allows for take-off, landing, and aerial manoeuvres including loops and rolls.

SALAMANDER GRAPHICS SYSTEM — A comprehensive picture drawing system for the home computer enthusiast. Pictures in any mode or colour set, text on the hi-res screens, and storage of pictures on tape. Requires 1 joystick.

ORIC TREK — A version of our classic Dragon Trek for the Oric-1! 10 levels of difficulty, 3 sizes of galaxy and more features than you can shake a Klingon at. A must for all Oric owners!

ORIC GAMES COMPENDIUM — Four exciting games for the whole family: Donkey Derby, Kingdom, Viper and Space Station.

DRAGON 32 and TANDY 32K (please specify):

Dragon Trek £9.95, Wizard War £7.95,
Golf £7.95, Grand Prix £7.95, Vulcan
Noughts & Crosses £7.95, Games Comp
D1 £7.95, Salamander Graphics System
£9.95, Super Skill Hangman £7.95, Star
Jammer £7.95, Nightflight £7.95.

BBC MODEL B

Dragon Rider £7.95, Tanks! £7.95, Games
Comp B1 £8.95, Games Comp B3 £6.95,
EDG Graphics (tape) £24.95, EDG Graphics
(disc) £29.95,
ORIC 1: Oric Trek £9.95, Games Comp 01
£7.95.

Continued from front page

"What makes us different from the independent retailer is that someone as large as W.H. Smith has to have a very clear view of the market.

"I see hardware being subject to further erosion of margins in the next few months and the market is so competitive that retailers are at each other's throats."

Mr Binnie is expecting a bumper Christmas in computer sales — perhaps as much as double over last Christmas.

He said: "I've seen estimates of one to one-and-a-half million units being sold in 1983 — half of them in the last four months, including January."

How does Boots decide which computers to stock? Merchandise controller Anton Boyes said: "The decision is not dissimilar to whether we take a new shaver.

"The first thing is whether it appears to be an innovation and offers good value for money.

"Then we look at in detail with a technical evaluation for performance and safety — that's terribly important — and whether it does what it says it will do.

"Sometimes you see things at a trade show and it turns out that they are prototypes.

"We look at how the manufacturers are going to promote the computer and then finally we set it out in the range of our existing products.

"It would be unlikely that we would take a microcomputer which did the same for the same price, although it may be we would have two at around the £170 mark.

"I must say the decision on which systems to stock this Christmas is one of the most difficult we have had to make. We are not committed to any at the moment, but we will be making a choice soon.

"I've never known anything like the market at present. Obviously it's critical that we pick the right product, especially as

there are going to be many more products and more people selling them this Christmas."

Boots stocks the Spectrum, ZX81, Dragon, VIC-20 and Commodore 64 in 170 stores and is soon adding the BBC micro. Before Christmas 250 branches of Boots will be stocking computers.

How do the independent-schoose? Andrew Margolis, of Lion Micro, which has stores in London and Brighton, said: "It's as difficult for us to decide what to sell so it is for the customer to decide what to buy.

"The home computer market is in demand driven — it's what people come in and want to buy. When someone comes in it's difficult to persuade them to buy something other than a Sinclair or a BBC if that is what they came in for.

"To take a particular line you have got to invest money in stock and training and we can only afford to invest if it warrants it.

"We can't hype something in the same way as the big retail chains.

At least one new computer — possibly two — may make an appearance on the shelves of John Menzies stores.

Nick Gregory, the company's product manager for computers, said the decision would be made in the next week or so from the machines the company had already evaluated. But there may also still be room for an outstanding newcomer, he said.

The company took these items into account: memory size, graphics and other major features, accessories and software, availability, support and promotion from the maker and publications — like books and magazines.

He said: "We take into account not only the box but what happens when the box is on the market."

John Menzies stocks computers in 109 stores and the top 20 have the whole range — ZX81, Spectrum, Dragon, Oric, Atari and VIC-20.

SPECTRUM SOFTWARE

40 BEST MACHINE CODE ROUTINES FOR THE ZX SPECTRUM £5.95

By Andrew Hewson and John Hardman
Section A: Three chapters explaining what you need to know about Z80 machine code on the Spectrum.

- How to load and save machine code.
- How to use the system variables.
- How program lines are stored.
- How to use the stack, the display, the attribute files.

Section B: 40 routines including.

- Scroll – up, down, side to side by pixel or by character.
- Search and replace, token swap, string search.
- Rotate character, invert character – horizontally and vertically.
- Line renumber – including GOSUBs, GOTOs, RUN etc.

20 BEST PROGRAMS FOR THE ZX SPECTRUM £5.95

By Andrew Hewson

Program titles include:
Machine Code Editor – Write, modify, extend and load machine code using this all-basic program. No need to use an Assembler when you have this program.
Index File – Learn about fixed length records, save numeric and string information, add to, sort, modify, delete and print your records. Ideal as a computer based filing system.
Duckshoot – Learn how to manipulate the attributes file and have fun at the same time.
Graphix – Construct up to 210 graphics characters with the full on-screen editing facilities, enhance and modify them and recall them later to build a detailed display to save on cassette.
Plus: FOOTBALL, DIGITISER, DIARY and many more.

BACKGAMMON 16K £5.95

8 Levels of play from novice to expert. Full colour display of tables and dice. Gamble on a single game or a series, double or quits. All the features of the ancient game.

COUNTRIES OF THE WORLD £5.95

16 and 48K on one cassette
Countries of the World is an educational package designed to give an appreciation of the location of all the main countries and some information about them.
16K version displays a world map, shows the position of each country and names its capital.
48K version: all the above plus prints the population, size, currency, and main languages of each country, and statistics on largest and smallest countries etc.

PLUS: Two complete world map screen displays for you to include in your own programs.

PILOT 16K (ZX81) £5.95

Fly your own aircraft.
Instruments and readouts: A/H, ALT, HDG, FL, GR, VOR, VSI, WIND, DME, ADF, and ILS see "NIGHTFLITE". Essentially the same as "NIGHTFLITE" but without the Hi Res Graphics.

PUCKMAN 16K (ZX81) £5.95

3 Mazes.
Highest score to date.
4 Independent guardians.
Magic strawberries.
Real time scoring.

NIGHTFLITE 16 and 48K £5.95

NIGHTFLITE puts you at the controls of a light aircraft flying at night. You can:
Climb, descend, take off,
Land, bank left or right,
Navigate between beacons,
Raise/lower the flaps,
Raise/lower the undercarriage,
Adjust engine rpm,
Raise/lower the nose varying amounts.
Runway lights appear on approach.
5 modes including Autopilot.
Written by a qualified light aircraft pilot.

SPECVADERS £4.95 16K

Defeat each squadron of Beeple Zaps and another appears only closer. Cyrian mothership with ejecting Zeetle Baps.
5 levels of play from Orions snails pace to close your eyes and hope.
Real time scoring. 3 lives. Pan galactic gargle blaster for highest score.
Descending asteroids.

MAZE CHASE £ 4.95 16 and 48K

4 or 8 Mazes, Highest score to date, 4 independent guardians, 3 lives, Full colour, Fast machine code action, magic strawberries, eat lemons to score more, real time scoring.

Fair deal from fairs

The Computer Trades Association has hit out at badly-organised badly-publicised "rip-off" computer fairs.

According to the Association's general secretary Nigel Backhurst, "our members reckon that there are about a third too many exhibitions taking place at the moment."

"They get bombarded with invitations to show their products at exhibitions, and there's no way they have time to check them all out. My own business had mail shots for five different exhibitions only last week — and in an average week we get at least a couple."

To help its members decide which fair's fair, the association is in the process of compiling an Exhibitions Approval List. Exhibitions will have to meet certain basic standards to get on to the list.

Nigel Backhurst said, "The standards aren't rigid — we'll assess each exhibition as it comes. You can't compare local microfairs with big events like the Earl's Court fair."

"But the sort of thing we'll be looking for is whether there's adequate publicity, adequate security and safeguards for exhibitors, and whether there's an advisory committee set up to take exhibitor's views into account."

"It's also important that exhibitions should be aimed at the right market — there's a general feeling that too many exhibitors try to mix their markets. People don't know if they're home com-

More high street micros

W.H. Smith is opening pilot computer shops-within-shops on Friday at its Birmingham, Croydon and Northampton stores.

As revealed in Home Computing Weekly, they will be test centres for a proposed network of such shops country-wide.

Each will have console units where prospective customers can try computers such as Mattel's new Aquarius, the BBC micro, Oric-1, Commodore 64, VIC-20, and Spectrum.

W.H. Smith, Strand House, 10 New Fetter Lane, London EC4A 1AD

Voltmace's new Delta 14 BBC handset

puter, business computer or general exhibitions."

Many of the culprits are small firms, although he said members were being advised not to exhibit at one show run by a large company.

The CTA now has 150 members. Dragon Data joined on June 20, and Boots is also to join.

Mr Backhurst stressed however that the CTA was not ordering its members to boycott non-approved events. The approved list would simply be a recommendation.

The list will be divided into four categories: trade only exhibitions, public (business), public (home/leisure), and public (general). The first edition will be published in September, with monthly updates appearing along with the Association's newsletter.

Members of the public will be able to get copies of the list by sending a stamped addressed envelope to Nigel Backhurst.

Computer Trade Association, 108 Margaret Street, Coalville, Leics LE6 2LX

Computer comic

Britain's first computer comic has just been launched. Called Load Runner, it appears fortnightly with a mixture of comic strips, feature stories and computer facts for the nine-16 age group.

Editor Bill Scolding said his aim was to entertain as well as educate.

Load Runner, 30-31 Islington Green, London N1 8BJ

Push-button games

You won't have to wear out your BBC computer keyboard by using it for games playing, if Voltmace's Delta 14 handset catches on.

The handset combines a joystick and a heavy-duty keypad which, according to Voltmace's sales director Tony Pearmain, is "tolerant to heavy pressure, such as is experienced when it's used

by excited children playing games."

As well as saving your keyboard for programming, Voltmace says that the keypad will make it easier to control games which use several keys.

A single handset can be plugged directly into the A/D port at the back of the BBC micro, and used just like an ordinary joystick. Or two handsets can be plugged into an adaptor which allows the keypads to be used.

At the moment, of course, you won't be able to use the keypad with existing BBC software. Voltmace is busy trying to talk BBC programmers into writing optional keypad control into their future games — as well as routines that will transfer existing software to the handset.

The handsets alone cost £10.95 each, and the adaptor box costs £13.95.

Voltmace, Park Drive, Baldock, Herts SG7 6EW

Fantasia fiasco

Brian Howarth was worried when he read in Home Computing Weekly that tape swap company Computerhouse was to set up a software subsidiary called Fantasia.

Because Brian's own software company, which has been around for a year now, is called Digital Fantasia — but it has nothing to do with Computerhouse.

"The names really are pretty similar", Brian said. "I just hope people don't get the two companies confused. I'll be writing to Mr Martin pointing out that we already operate under the name Fantasia."

Digital Fantasia's forte is machine-code adventures for the BBC. Called the Mysterious Adventures series, the games were all written by Brian himself. But within six weeks Brian hopes to release the whole series for the 48K Spectrum.

Digital Fantasia, 24 Norbreck Road, Blackpool, Lancs

Power with stability

Disturbed by mains voltage disturbances? Browned off by brownout and screen drift? If it's important to you to ensure that your micro gets a stable power supply, then Cetronic has a range of mains transformers that may do the trick.

Called the Reguvolt P range, they start at £110.25 for a model designed to handle 120VA.

Cetronic, Hoddesdon Road, Stanstead Abbots, Ware, Herts SG12 8EJ

100 FREE PROGRAMS FROM SILICA SHOP — WITH EVERY PURCHASE OF AN ATARI 400 800

ATARI PRICES REDUCED!

We at Silica Shop are pleased to announce some fantastic reductions in the prices of the Atari 400/800 personal computers. We believe that the Atari at its new price will become the U.K.'s most popular personal computer and have therefore set up the Silica Atari Users Club. This club already has a library of over 500 programs and with your purchase of a 400 or 800 computer we will give you the first 100 free of charge. There are also over 350 professionally written games and utility programs, some are listed below. Complete the reply coupon and we'll send you full details. Alternatively give us a ring on 01-301 1111 or 01-309 1111.

- ATARI 400 £149**

- ATARI 800 £299**
with 48K

400/800 SOFTWARE & PERIPHERALS

Don't buy a T.V. game! Buy an Atari 400 personal computer and a game cartridge and that's all you'll need. Later on you can buy the Basic Programming cartridge (E35) and try your hand at programming using the easy to learn BASIC language. Or if you are interested in business applications, you can buy the Atari 800 + Disk Drive + Printer together with a selection of business packages.

Silica Shop have put together a full catalogue and price list giving details of all the peripherals as well as the extensive range of software that is now available for the Atari 400/800. The Atari is now one of the best supported personal computers. Send NOW for Silica Shop's catalogue and price list as well as details on our users club.

Home Computing Weekly
HCW1783

When the playing has to stop

In these columns and in the letters page of Home Computing Weekly, there has been much soul-searching about the role of computer games. Are they just a waste of time? Should you feel guilty about playing them? Are they even (as one man suggested) a threat to the whole home computer market? Or, to go to the other extreme, are they the best thing since sliced bread?

Speaking as a professional programmer who works on mainframes during the day and uses a microcomputer in my spare time, I'd answer no to all these suggestions.

Games are a great way to introduce children and adults alike to computers — from micros right up to mainframes. They can give you an appreciation of what the machine can do. They can familiarise you with the keyboard. And they can help to take away the fear of computerisation — a fear which professional programmers, by shrouding the subject in jargon and mystique, must be at least partly responsible for engendering.

Even professionals sometimes play computer games — to relieve the strain of programming to the unrealistically tight schedules laid down by their non-computing clients!

But games have their limitations. To use the power of even a Spectrum just for playing games is a bit like using an atom bomb to crack a nut. And £150, which is about the price of the Spectrum plus a tape recorder, is not peanuts — it's some people's gross pay for a week. Would you pay a painter £150 to paint your house if all he did was stand around bouncing a ball?

In any case, if the reactions of my own children are anything to go by, games lose their appeal in a comparatively short time — in about six months on average.

At this point, sensible parents will leap in and encourage their children to start using their micro in a useful way. Once kids realise the possibilities the micro holds for lightening their homework burden, or helping with revision, they will soon begin to use it to the full. From then on, they'll just go back to playing games on it for odd moments.

Most schools now have at least one microcomputer. My youngest son's school bought eight micros in 1979 and hasn't looked back since. You can be sure that, whatever these micros are being used for all day, it isn't just for playing games.

A lot of my neighbours have gone past the games-playing stage and are now using their micros more fully. One uses the micro to control household functions. One lad uses the home computer to control his train set. Another — an accountant — says he keeps all his clients' records on his home micro.

I think the biggest barrier to using micros constructively is not games, but this beastly hybrid language Basic. Its limitations, and the need to play around with PEEKs and POKEs, make it well-nigh impossible to carry out the simplest programming task in less than a dozen lines. You get there in the end, but at a cost of time and effort which makes it uneconomic for commercial programs.

By all means learn Basic as a standby, but if you want to push your micro to its limits, machine code is the way to do it. Not only will your micro respond better to machine code — it's even easier to understand and learn it too.

R.H. Hill
Programmer
Woodford Green, Essex

● This space is for you to sound off about the micro scene, to present insights or to hurl brickbats. Share your views by sending them to Paul Liptrap, Opinion, Home Computing Weekly, 145 Charing Cross Road, London WC2H 0LF. Please include your occupation and your interest in computing.

Lynx has more memory

Making its first public appearance at the Earls Court Computer Fair was the 96K version of the Lynx, which should be available from retailers now at a price of £299.

You can't actually use all 96K for programs, though. The Lynx's high-resolution graphicstake up 32K, leaving around 61K for machine-code programs and around 37K for Basic programs. For comparison, the 48K Lynx allows the user 13.75K of RAM for Basic programs.

The bigger Lynx has more ROM, too — 4K of it. This extra ROM is needed for new features: drivers for both parallel and serial printers, pre-formatted sound effects, a CIRCLE command, and a command that lets you use the 24K of machine code accessible RAM to store data for Basic programs.

Owners of 48K Lynxes can upgrade their machines to 96K for £89.95.

Computers, 36a Hills Road, Cambridge CB2 1LA

Plug-in games for your VIC

Not to be outdone by Thorn-EMI, Commodore has also announced the release of five new cartridge games for the VIC.

The first and most expensive is Gorf, claimed by Commodore to be the first time this arcade game has been available for a home computer. It costs £24.95, but contains four different space adventures, and you have to complete one before moving on to the next.

Then there's Cosmic Jailbreak, in which you take the role of a cosmic prison warden, Cosmic Cruncher, which challenges you to destroy alien satellites, Menagerie, a version of frogger with fleas and animals instead of frogs and logs, and Money Wars, in which you take the money and run. They all cost £19.95.

Commodore, 675 Ajax Avenue, Slough, Berks SL1 4BG

MICROSPHERE

MICROSPHERE COMPUTER SERVICES LTD
72 ROSEBERY ROAD - LONDON N10 2LA
TELEPHONE 01-883 9411

EVOLUTION (48K Spectrum)

Can you trace the course of evolution from the primordial soup to man, keeping a balanced world and surviving the odd disaster as you go? Should be easy... after all it's been done before!

Only £6.95

OMNICALC (48k Spectrum)

The best Spectrum spreadsheet you can buy. Written in machine code to be faster. It gives you more space for data, and to allow more features to be included. It is guaranteed uncrashable.

"If more programs shared the quality of OMNICALC, then we might see more Spectrums in offices!"
Home Computing Weekly 3/5/83

"It is ideal for someone who has just found the spreadsheet concept, but it is also a very powerful tool for anyone who has used one previously."
Sinclair User June 1983

Complete with comprehensive manual £9.95

ZX-SIDEPRI (Spectrum & ZX81 versions)

Use ZX Sideprint to print sideways, giving you 80/132 etc. characters per line. (State version reqd) £4.95

CREVASSE & HOTFOOT (any Spectrum)

Can you make it across the ice cap whilst chaisms open and close all around? Or help the rabbit get to fields full of carrots — but remember! the plumper the rabbit, the greater the danger.

2 original games for only £4.95

NEW!

THE TRAIN GAME (any Spectrum)

NEW!

First there were model railways, then there were computers. Now Microsphere gives you both in one.

Featuring passenger, goods & express trains, tunnels, viaducts, points, stations, turntable bonus games, collisions, derailments, male passengers, and everything else you expect from a major railway!

Two track layouts on each cassette. Superb value for money.

Only £5.95

Cutting remarks

It may be your magazine that is guilty, but I am sure that I read a letter from a consumer recently who was expressing displeasure at the current price cutting war in the microcomputer market.

What kind of fool is he? Doesn't he realise that a price cutting war benefits everyone, and prevents the market from getting stagnant?

A good example of a stagnant market is the one for Atari 400/800 software. A good program will cost you £30. A bad one will be about £15 cheaper. Yet does anyone seriously believe that the programming skills used to produce an £8 Spectrum program are any less than those used for Atari programs?

For some reason, people seem to think they can charge the earth for any Atari program. Presumably this is because Atari themselves have set a trend.

We've all heard the undenied rumours about the ZX81 only costing £10 build, or the Commodore 64 costing less than the VIC-20, so why are people so keen to line the pockets of faceless businessmen? I'm certainly not. Let battle commence!
Ian McLaughlin, Middlesbrough, Cleveland

★ Software winner

Munch Maze amendments

I am the owner of a VIC-20. I was very pleased to see the Munch Maze game in HCW 9 — it ran very well with great graphics.

But I didn't like the two-part business, so I loaded and ran the first part, then without NEWing it I loaded the second part, and the game still worked.

Next I decided to make it more comfortable for the user by getting the computer to load part two. If you use the following amendments when you load and run Munch Maze, the second part loads automatically:

```
93 Poke 36879,27: Print
  " CLR
```

```
LOAD" + CHR$(34) + "Munch
Maze Part 2" + CHR$(34) +
```

```
" "
```

```
94 Print " 4 cursor
down RUN"
```

And add the following line:

```
95 Poke 198,3: Poke 632,19:
```

```
Poke 633,13: Poke 634,13
```

Amith Cabraal, Sidcup, Kent

Hands off the dragon

Who does he think he is? I am of course talking about your reviewer N.W., who chose to walk the path of the Knight's Quest in HCW 15. As soon as he found the dragon, he killed it. What's more, he boasted that it was easy.

Well, of course it was easy to kill the dragon, as it was expecting to be fed, not killed. If N.W. had taken heed of the instructions at the start of his quest, he would have read that dragons are not much use when they are dead — silly boy.

Although it is commonly believed that the only good dragon is a dead one, it just isn't true in this case. N.W. would have found that he could not move the giant or board the ferry or even use his book of spells without the dragon as his friend.

Obviously N.W. is a novice adventurer, and can be forgiven his dragon slaying. But don't let it happen again.

One final word. This adventure must have each task completed before the next can be attempted, unlike some which let you progress to the next stage, only to tell you that you have not got the correct equipment.

T. Kemp, Norwich, Norfolk

Spectrum user club

I haven't seen any Spectrum User Clubs anywhere, so I've decided to start my own with the help of a friend of mine.

It will cost £4.60 a year, and in that year members will receive six issues of our magazine — one every two months.

Mark Burnett, 24 Inverness Drive, Hainault, Bford, Essex

It isn't microfair

Why oh why is there never a microfair in Scotland? The fairs in England are too far away for us to get to. What's wrong with an Edinburgh Microfair or even a Glasgow microfair?

If anyone reading this has an answer to this mystery, perhaps they'd write in and let us all know...

M. Logan, Hawick, Scotland

U.S. SCENE

Microdrive shaped like a credit card

If you're fed up with the slowness of cassette players and you can't afford a disc drive then help is on the way. There is a new data storage format which will shortly be available for home computers.

It is called the "wafer" and is a relative of the data cassette. The wafer is an endless loop tape which is a sixteenth of an inch thick and is housed in a small cassette-like case about the size of a credit card. The tape itself is made up of high grade video tape cut very small.

The tape comes in various lengths from five to 50 feet in five foot increments. The tape zips past the record/playback head of a specially designed recorder/player at 10 inches per second, as opposed to conventional cassette speed of one and seven-eighths inches per second. A 50 ft tape can store up to 128K!

Retail list price for the required recorders will only be \$100, not so much more than certain home computer companies are now asking for their own data cassette machines.

The manufacturer of this new system is calling it the Microdrive, and calling the wafers Microwafers. The retail price of the wafers is expected to be in the three to five dollar range. A 32K program can be expected to load in about 15 seconds, as opposed to about seven seconds from a disc.

Texas Instruments and Coleco have already committed themselves to the new system.

TI is expected to market its Microdrive very shortly, although they may use another name. Coleco has already brought out its Super Game Expansion Module No. 3 with a built-in Microdrive and two games included, Super Donkey Kong and Super Gorf.

The advertising claims that this module will provide "realistic arcade game play." Coleco has 32K built into their machine, which is quite a lot for a machine that can only play games.

Right now, the Microdrive is otherwise unavailable, but this situation will change in the next few months. Look for the upcoming ads. Otherwise I will keep you posted on price, availability, and vendors.

Marketed under the TI name comes the Expander. This interesting device makes possible voice recognition and speech synthesis for TI's model 99/4A. The unit includes a 64-position membrane keypad and has a slot for accepting game cartridges. It includes a three-axis joystick and a combination headset-microphone unit for quiet input and output. An accompanying joystick controller has three buttons which can be used for controlling special functions. No price yet.

Finally, the Winky Board II is a little cassette interface device for Timex Sinclair computers that automatically filters out stray electrical glitches that would otherwise cause a bad load, resulting in easier program loading. It has an LED volume indicator, is capable of saving a program to two cassette recorders at once, and comes with a program enabling the user to make backup copies of programs in memory. The unit requires no external power source or any hardware modifications. It costs \$24 and is available from G. Russell Electronics, RD 1, Box 539, Centre Hall PA, 16828.

That's all for this week.

**Lunar Lander
TI-99/4A £8**

Stainless Software, 10 Alstone Road, Stockport, Cheshire, SK4 5AH

A version of the arcade game in which you must safely land in a valley, avoiding the rocky mountainsides. You have the choice of five venues each becoming more formidable as the local gravity increases. When you finally come down to Earth, which is the most difficult, there is the additional hazard of a lake.

The keyboard is used to control your descent by the spin and variable thrust of your lander. These require careful and constant adjustment. Instrument

readings are displayed at the top of the screen

The action is slow — a limitation of any program written in TI Basic — but this in no way detracts from the game. The more experienced player can turn the readings off thereby speeding everything up

Two minor points are that the Y character has been mis-assigned to a blue block, and poor navigators might displace parts of readings.

**Starjammer
Dragon +
Joystick £7.95**

Salamander, Dept C, 27 Ditchling Rise, Brighton BN1 4QL

Here we have a very colourful space dogfight by Franklin Frogstar (is this guy for real?) You are out to destroy an alien fleet intruding into your galaxy

Your laser sight is in the centre of the screen and you steer the enemy into this with your joystick. A nice funneling effect is produced with the stars although larger heavenly bodies remain curiously static.

A limited amount of energy,

indicated at the bottom of the screen, protects you from enemy fire at a distance. If you're slow this is soon used up, even though you do have three lives

The explosions are terrific and the graphic representation of enemy fighter and backgrounds quite good. At the end of each game there's a Roll of Honour to enter up to 10 high scores — essential in my competitive family

**Oric Trek
Oric-1 48K
£9.95**

Salamander, Dept C, 27 Ditchling Rise, Brighton BN1 4QL

It just goes to show that an old idea can still inspire good games. The Klingons are stirring up trouble again and you with your faithful Enterprise crew are called in to sort them out.

The galaxy has supernovas and black-holes, some of the Klingons sport the latest in tractor-beams while Uhura keeps you informed of the news from Starfleet Command. The damage control is nicely done

Another novel idea is the abandon ship option, a last resort

in which you are reprimanded for cowardice and placed in command of a suitably weaker ship. You can at least continue where you left off though

The screen display is neat and pleasing to look at, but the sound is a bit weak, with too much reliance upon the Oric's pre-programmed repertoire

Oric-Trek is a real time game so there's no agonising over what to do — it's kill or be killed

**Games that
are out of
this world**

Or are they? Our reviewers beam down their opinions on a selection of space games

**Invaders
Jupiter Ace
£6.50**

Hi Tech Microsoft, 42 Cranleigh Drive, Whitfield, Dover, Kent

Feeble version of the well-worn arcade game. No colour, of course, but on a machine with user-defined graphics the invaders ought not to be just white squares and oblongs or the defender's gun merely a small square

The bombs fall so slowly and jerkily the program might as well be in BASIC and there is no synchronisation between the gunfire and the destruction of the invaders.

If it were not for the increasingly but meaningless score in the bottom left hand corner you'd hardly known they'd been zapped. They present so little threat to the player that most people will end up feeling sorry for them!

The program was very difficult to load and came along with three others from the same supplier which totally resisted all attempts. The Ace would put up the dictionary notice but firmly refused to say "OK" — maybe the smart machine was trying to complain about the misuse of its potential.

Let's face it — the sound from your Dragon 32 wouldn't win any prizes at an Eisteddfod. What you need is a:-

Dragon 32

SOUND EXTENSION MODULE

- Fully-cased module plugs into cartridge port
- Provides 3 channels of sound; 3-note chords and harmonies over 5 octaves
- Uses new BASIC command. No need to 'Peek' or 'Poke'
- Many built-in sound effects (e.g. bomb, laser)
- Music and graphics can occur together without loss of speed
- Based on popular, well-proven sound generator
- Two Input/Output ports included
- User manual provided, with examples

SOFTWARE FOR DRAGON 32

- HI-RES High Resolution Display for DRAGON 32** price £25.30
- Supplied on Cartridge for DRAGON 32
- HI-RES gives you a 5 column by 24 line display instead of the 32 column by 6 line display on your DRAGON 32 computer. If that was all it would be quite something, but in addition HI-RES has the following features:
- ★ HI-RES does not eliminate BASIC
 - ★ Upper and lower case as standard
 - ★ Auto repeat International character sets
 - ★ Improved shift control to give more key values
 - ★ Redefinable characters and Sprites
 - ★ Extra BASIC commands for screen control
 - ★ About 19 500 bytes available for BASIC programs
 - ★ Load and save programs and use printer normally
 - ★ Return to standard display mode at any time
 - ★ Graphics and text can be mixed on the screen

We firmly believe that HI-RES is the most useful and powerful software item you can obtain for your DRAGON 32 computer.

HI-RES does not invalidate any programs you have written so far, although you will find that they can be enhanced to take advantage of your new BIG screen — over twice the capacity of the existing screen.

How easy is HI-RES to use?
 Just plug the cartridge in, switch on your computer and HI-RES will be in action. You will wonder how you ever managed before HI-RES was around.

What about Graphics?
 HI-RES allows Sprite graphics which are not available on a standard DRAGON 32. If the entire character set is used then over two hundred sprites can be defined in a single program! The BASIC graphics functions work directly on the HI-RES screen allowing you to mix text and drawings. HI-RES allows two colours, green and white, in both normal (black on colour) and inverted (colour on black) mode.

What extra commands do I get?
 HI-RES implements two extra PRINT statements to allow normal and sprite printing on its big screen. Extra functions, about twenty, have been added to the CLS command. These allow you to change character sets, switch the cursor on and off, underline text and more.

Is there anything else?
 Yes, HI-RES extends the keyboard so that an extra shift is possible on the top row of keys. We supply you with a free overlay which neatly positions over the top of your keyboard, you write in the values depending on the character set selected.

Sounds good? It's even better in the flesh. Place your order by phone or post or send a LARGE SAE for details of all our products.

Order by ACCESS-VISA or cheque by telephone or post 24-hour answerphone service

Old favourites get a face-lift

These programs are all versions of traditional games, converted to play on your micro

Scrabble 48K Spectrum £15.95

Psion, 2 Huntsworth Mews, Gloucester Place, London NW1 6DD
 Writing a home computer version of Scrabble might seem like an impossibility, but Psion has got 90 per cent of the way there. Up to four players can play, and all or none of them can be the computer. There are four skill levels (and hence four speeds), and the program beat me on level 2.

Besides all the permutations of players and skill levels, there are several other options, and

good display, and a booklet which explains both the game rules and the program's operation. Too easy for the real Scrabble fanatic, perhaps, but for most of us a unique and fascinating program

instructions	95%
playability	96%
graphics	87%

even a modified display if you have a monochrome TV

Being able to see the players' letters makes it less of a gamble to change letters. You can opt to see the computer's letters or not — and you can also watch it trying out different moves if you want

About 11,000 words are held in the program's dictionary — not a lot compared to the Oxford Dictionary, but pretty good for a Spectrum. Each time you enter a word it's checked against the list, and if no match is found, the computer asks "Are you sure about ...?" Type Y for yes and it takes your word for it, a great temptation to cheat if you're losing

Excellent error trapping, a

Super Skill Hangman Dragon £7.95

Salamander Software, 27 Ditchling Rise, Brighton BN1 4QL

An excellent version of the standard word game for one or two players.

The computer selects a word at random out of a vast selection. If you guess the word in time you score a point, if you fail you lose a life. When you have lost three lives the game is over. The computer adjusts your skill level depending on how many guesses are taken for each word.

There are three levels of help — one gives the first letter, two gives a random letter and three gives no help at all. No help means just that, and it is possible to hang the man by simply pressing the same wrong letter over and over.

There is an option to play with the timer on. With this you have a 30-second time limit to guess each word

Backgammon 16K ZX81 £5.95

Psion, 2 Huntsworth Mews, Gloucester Place, London NW1 6DD

I'm no great shakes at backgammon, so this program suited me fine — it played a serious game, didn't get impatient, and never made rude remarks about my skill

The screen display is uncluttered and easy to use, with the dice simulated at the bottom of the screen

To move you just type in the letter corresponding to the position you want to go to — the computer does the rest. Illegal moves are refused with reasons. There's also a "doubling cube" facility for those who like to gamble

Four levels are offered, and on the simplest, the ZX81 occasionally made a move which even I thought a bit silly. The other levels take longer but on each you have the choice of fast or slow modes

instructions

C.C.R.

Othello 48K Oric 1 £6.50

Kenema, 1 Marlborough Drive, Worle, Avon

Also known as Reversi, this game involves the capture of opponent's pieces by reversing them to your colour. The aim is to get more of your counters on the board by the end of the game than your opponent. In this version you can play against a friend, against the computer, or watch as the computer plays itself.

My copy suffered from loading difficulties (even though it was saved at 300 baud), and despite several attempts I

couldn't obtain the on-screen instructions without crashing it.

The display is well laid out, but I fear the sound effects are a little overdone for a "thinking" program. ZAPS when reversing pieces, PINGS at the end of a move, and a rising scale while the Oric is thinking

The computer's thinking time is in fact painfully slow, and to have the computer play itself soon gets very boring. Luckily a human can intervene at any stage

How to add new commands to your ZX81

Soon after the launch of the ZX81, there was a rumour circulating that the BASIC commands READ, DATA, and RESTORE were included on the original design specification of the ZX81, but these had to be dropped through lack of space on the 8K ROM.

While the omission has not caused many problems to programmers, there are circumstances when their absence has meant that valuable RAM space cannot be used economically.

One example is in filling a large array with data stored in a program. Without READ/DATA, the usual method is to have one LET statement for each element of the array — and that can consume a lot of space!

Make up for some of the ZX81's omissions. David Nowotnik has done the work for you

To overcome this problem, I wrote two machine code routines to imitate READ and RESTORE.

The assembly language listing of these routines is shown in Table 1. The total length of these routines is 128 bytes; they are stored in one ROM line. This REM statement MUST be the first line of the program. Table 2 contains a hexloader, which places the machine code into the dummy REM line (line 1), which

starts by containing 132 full stops.

The numbers to enter using this routine are shown in the hex dump (Table 3). The hex numbers also appear in Table 1, so you can check that you are entering them in the correct order. In using the hex loader, enter one pair of hex

digits for each INPUT prompt; enter S to stop. Line 6 prevents you accidentally placing numbers into bytes which are not full stops.

Once you have entered all the machine code, delete all lines except line 1, then enter the program lines in Table 4.

In most other computers, READ works by searching through a program from the beginning until a DATA line is found. The first number or word after DATA is read, and stored for future use as a variable. The next time READ is used, the next number or word is read, and so on.

A DATA line can contain several words or numbers; each item is separated by a comma. Once you come to the end of a DATA line, READ will search for the next DATA statement in a program. If you try to READ more items of data than are present, you should get a system error message. RESTORE resets

C=VALAS(TO RAND USR READ)

Data is stored in a special REM line. To differentiate it from a normal REM, REM is followed by a graphic shift A (CHR\$ 8). The machine code routine recognises this combination as a DATA command.

Line 9999 (table 4) contains

combination of two together fools the LIST command into believing the end of the program has been reached.

You can list the rest of the program with LIST 2.

As a short example of how to use this routine, add the program lines in table 6 to those in table 5,

then RUN. After that, change the first data item in line 160 to 6. This will demonstrate how the 'out of data' trap works.

Note that you can mix numeric and string data in one data line. Unlike the Spectrum, quote marks are not required for string data.

Table 5 — an example of READ/DATA

```

100 LET C=HLA$(TO RAND USR READ)
110 DIM A$(32)
120 FOR I=1 TO 32
130 LET A$(I)=CHR$(TO RAND USR READ)
140 PRINT A$(I)
150 NEXT I
160 PRINT "ONE TWO THREE FOUR FIVE"
    
```

Table 3 — machine code hex listing

the data search 'pointer' to the beginning of the program.

My routine works in much the same way. Instead of commands READ and RESTORE, numeric variables with these names are declared (Table 4) which hold the addresses of the appropriate machine code routine. RESTORE is mimicked by the program line

Table 4 — READ RESTORE initialisation routine

```

1 REM
10 FLEHF
20 DIM AS(32)
30 LET PESTOPE=16520
40 LET PESTOPE=16520
50 PRINT USR PESTOPE
9999 REM
    
```

RAND USR RESTORE

There are two versions of the READ command, one for numeric, and one for string data. Typical examples of these are string: 100 LET CS=AS(TO RAND USR READ) numeric: 100 LET C=VALAS(TO RAND USR READ)

a REM command followed by an inverse space character (CHR\$ 128). This allows the routine to recognise the end of the program. Should you try to READ more data than is present, the machine code routine recognises the end of program marker, and prints the message 'OUT OF DATA ERROR' at the base of the screen.

An automatic RESTORE then occurs to prevent the program crashing.

The combination of CLEAR and DIM AS(32) in table 4 ensures that AS is the first variable in the variables storage area of RAM.

The machine code depends on this, it uses AS as a temporary store. AS should be dimensioned to at least the length of the longest DATA item.

When you have entered the machine code, try LISTING the program. All you will get is: 1 REM

The rest of the program is masked. The reason for this is the first two bytes after the REM, they have the hex value 76, which is the NEWLINE character. The

MOONLANDER

1983 UPDATE OF MAN'S GREATEST EXPLOIT

Push your nerve to its absolute limit!

NEW

ZX81
16K

Can you make a soft landing from a lunar orbit 120 miles high? Constant onscreen monitoring, AGS and pilot (MGS) systems based on realtime algorithms, close landing on TOR scan, great graphics with touchdown status printout... don't run out of fuel or miss your safeand zone full orbit schedule or touchdown practice from 200 feet

Available only from ORION £4.95 inclusive

How's your memory? It needs to be good to escape from the maze

How it works

40-100 define characters
 120-170 set colours
 200-370 lays out screen, prints score, GOSUB to walls lay out
 380-400 print indicator showing level
 430-460 wait for key press, check if maze finished
 480-590 check E pressed, test for fruit ahead, move upwards and beep
 610-720 as above, except key X, move down
 740-840 key S pressed. Check for invisible door, moves through if there is GOSUBS score increment, or decrement if no door
 860-910 routine for printing on screen
 930-1170 set flash time according to level draw walls and places random doors
 1180-1340 randomise to see if to print fruit check if fruit all used if not, GOSUB print fruit
 1370-1380 Print fruit
 1360-1450 Effects for eating fruit increase score
 1470-1580 flash openings in wall for set time
 1600-1700 effects for moving through opening
 1720-1830 same for failing to find opening correctly
 1850-1980 game finished, check score
 2000-2150 game over, replay or quit
 2170-2260 new maze, score good enough
 2280-2340 variables set-up

In this game, you have to guide a figure through a maze — but it's not as easy as it sounds!

A number of vertical walls are printed down the screen, with channels in between. Random doors are set into each wall.

These openings in the walls flash for a set period of time at the beginning of the game, during which you must memorise their locations.

After 15 seconds (on the easiest level) the doors close up. You must now guide your figure across the screen using keys S and X to move up and down and E to try to move through the now invisible holes in the walls.

The figure leaves a trail behind him. For each door you

You've got just 15 seconds to memorise the location of the doors in John Powers's game for the standard TI-99/4A. And time gets shorter as your memory improves

Hints on conversion

If you would like to try to convert this program to another machine remember that the Texas has a 24 by 32 screen, and a good amount of space can be saved by using multiple line statements — the program only takes up 5½K anyway — not available on the standard TI.

Here are the more unusual commands

CALL KEY(M,K,S) Where K is the ASCII value of the key pressed, and S returns 1 if pressed. You can replace this with INKEY or GET.

CALL SOUND(D,N,V) Where D is duration, N is note in Hertz, V is the volume. Most machines have some sound capabilities so it's easier to write your own.

CALL CHAR(A,N\$) Defines characters in Hexadecimal. N is the ASCII character to be redefined. Characters are defined left-to-right from the top. Each digit represents the pattern in a 1x4 horizontal block of pixels; so there are 2 Hex digits for each line of the 8x8 square.

CALL HCHAR(R,C,A,P) Positions ASCII character A, and repeats horizontally from coordinates C and R P times.

CALL VCHAR(R,C,A,P) As above except repeats vertically.

CALL COLOR(S,F,B) Defines character foreground and background colour. Replace with GCOL or INK or other command.

CALL SCREEN(X) Sets screen colour. Replace with PAPER or VDU 19 or COLOUR statement.

CALL CLEAR Clears screen. Use CLS.

CALL GCHAR(R,C,V) Returns ASCII code of character at position R,C in variable V. Use a POINT or screen PEEK.

successfully pass through, your score increases by 100. If you try to pass through where there is no door you lose 35 points.

When you eat a fruit (placed randomly in the maze), the doors become visible for five seconds and you score bonus points.

There are three levels of skill. An indicator at top left

Variables

Z row of print position
 V columns of print position
 G level
 CL column of figure
 RW row of figure
 GC ASCII code from GCHAR
 CT column position of walls
 RA/RB position of doors in walls
 COUNT number of fruit on screen
 BF number of fruit available
 FI random position of fruit
 SC score
 MS screen messages

shows you current level, you pass onto the next level automatically if your score is high enough. The game is fairly easy to play at the lowest level but it takes a good deal of skill to navigate your way around the harder mazes.

Games of the unexpected for the unafraid...

THE WHITE BARROWS

Somewhere amid this maze of burial chambers lurks an Evil Sorcerer whom you need to trap. Trouble is, he's protected by Trolls, Dwarves, Serpents and the occasional Dragon or two. Your magic staff will block the tunnel to prevent him escaping unless, that is, he outwits you.

A real brain twister, White Barrows requires both brains and brawn from its players. It's no good just hacking your way through the Barrows and hoping to fall over the Sorcerer. Eventually you'll meet a Dragon, and they don't hack easily! You'll need all your strength and cunning to survive this one for long.

THE WHITE BARROWS Only £6.50 all inclusive!

CELLS AND SERPENTS

More monsters than you ever thought could live behind your keyboard. Wander the hills in search of gold and glory but be very, very careful where you tread! There are things here that will make your wildest nightmares look like Julie Andrews. Fancy meeting a Mind Flyer, for example? Or how about shaking hands with an Asmodeus? (You'll only do that once!) Treasure is here to be found though... the hard way.

See just how good you really are at adventuring with this practically unsurvivable fantasy. Not for the faint of heart or the slow of sword.

CELLS AND SERPENTS Only £6.50 all inclusive!

SPECIAL DEAL

Both programs for only £11.45 all inclusive!

Our Adventure Series programs are available on tape for the following systems:

Commodore VIC-20 (not available for White Barrows), Commodore PET, Sharp MZ-80A and MZ-80K, Tandy TRS-80 Model 1, BBC Model B or 32K Model A, Atari 400 and 800, Sinclair 48K ZX Spectrum.

ASP Software, ASP Ltd,
145 Charing Cross Road, London WC2H 0EE

Please send me . . . tape(s) of the following programs
The White Barrows @ £6.50 each
Cells and Serpents @ £6.50 each
Both tapes at special price only £11.45
My system is a . . . computer

TRADE ENQUIRIES WELCOME

Something for everyone in the micros of '83

The all-purpose micro?

Memotech's MTX500, from a company best known for ZX81 add-ons, is one of the heavyweights of the new bunch — in price as well as size and weight.

Due on sale in two months at about £275, it is being promoted as the all-purpose computer.

Starting from the outside, it is clad in black aluminium with a 79-key QWERTY typewriter-style keyboard with, to the right, 12 keys for numbers, cursor control and editing plus a further eight user-definable function keys.

Inside is 32k of RAM — expandable to 512K — plus 16K of video RAM. It can display 16 colours, text on a 40-column screen, and graphics at 256 by 192 with moving user-definable graphics, or sprites.

Standard outputs are Centronics-type printer port, two ports for joysticks, an uncommitted input-output port, 2400 baud cassette port, separate ports for TV and monitor, three-voice sound with hi-fi output and a dedicated port for cartridges.

Optional expansions — with more promised — include 80-column colour video board, twin RS-232 interfaces and 5¼in and 8in floppy disc interfaces to run CP/M, the operating system for much business software.

In the 16K ROM are Memotech's BASIC, the LOGO language used in education for sprites and NODDY, a language which makes question-and-answer programming simpler, according to Memotech.

There is also an assembler/disassembler with a special screen display — controlled by the keyboard — of the storage locations of the computer's Z80 processor, the memory and the program.

Machine code can be stepped through one instruction at a time and called from BASIC.

Pascal comes as an add-on ROM pack.

Memotech is promising at

Gloria Douse, 20, with the Laser 200

least 12 arcade-style games at launch, four business programs, including a spreadsheet and word processor, the first two of a series of educational programs and four board games — chess, backgammon, Othello and draughts.

Financial manager Robin Tupper said the MTX500 production would be split, with a third each going to America and Europe.

Memotech, Station Lane Industrial Estate, Witney, Oxon OX8 6BX

Atari's large-scale launch

Atari is soon launching no less than four computers here, together with about 11 peripherals and accessories.

No prices have yet been decided. All the new micros will be compatible with existing software, they will have full typewriter style keyboards and four extra graphics modes to add to the present 12 which can be called from BASIC.

These are the details so far

- The 600XL has 16K of RAM — expandable to 64K — built in BASIC in the 16K ROM, four voices, 16 colours in a choice of 16 shades, help key, self-test feature and cassette port.

- The 800XL is similar, but with 64K of RAM as standard.

- The 1400XL has all the features of the first two, plus four function keys, a modem interface — replacing the modem in the U.S. model — and a built-in voice synthesiser controlled by English-like commands.

- The 1450XLD is the top of the new range — the D stands for disc. It has a built-in double-sided dual density drive for a 5¼in floppy disc. Alongside is a storage compartment which can be easily replaced with a second drive.

The first two are due for possible release in the late autumn.

Among the new peripherals and accessories:

- A four-colour printer-plotter — using small ballpoint pens on 4½in plain paper — similar to the models marketed by Tandy, Orc and others.

- A restyled and updated program recorder.

- An 80-column dot matrix printer, needing no interface for Atari computers, running at a claimed 40 characters per second.

- A letter-quality printer.

- A CP/M 2.2 module — the operating system used for much business software — which also adds 64k of RAM and 80-column monitor output.

- A 5¼in floppy disc drive.

- A touch tablet with built-in pen for easier drawing on screen.

- A remote control joystick, probably using infra red. In America

Memotech's MTX500

radio is used, but regulations forbid this in the UK

A "trak-ball" controller with two fire buttons — similar to arcade machines

A pistol-type joystick with fire button

An external processor bus for memory expansion and future peripherals

Atari (UK), Atari House, Railway Terrace, Slough, Berks SL2 5BZ

Adler's Identity crisis

In the upper price bracket is the £400 Alphatronic PC from Triumph Adler, the giant West German company well-known for its typewriters

It is the company's first venture into personal computers, although it has been supplying business micros for some years

The Alphatronic PC, using a Z80 microprocessor, has 64K of RAM, 32K of ROM — including a 24K BASIC — a typewriter-style keyboard with six function keys and a slot for cartridges, including an extra 16K of RAM

It can display eight foreground and eight background colours on screen

Outputs include RS-232 and Centronics-type for printers, black and white TV, RGB and monitor and floppy discs — a drive for discs is available

It uses the CP/M operating system, so the existing range of about 300-plus programs, mainly for business, would be available, said marketing manager John Kendall

He said: "We are confused because everyone seems to want it. People who have got Sinclair machines want to get to something which is more powerful and a lot of companies want it too. There is a big demand for a standard 64K CP/M computer

"I would imagine that the Commodore 64 will come under a major threat"

The Alphatronic, due to go on sale in October, would have a target of 40 programs — half educational and half games — available from day one

Triumph Adler, 27 Goswell Road, London EC1M 7AJ

Made in Hong Kong

Two low-cost computers will soon be reaching the dealers from

Hong Kong — the Laser 200 and the COMX 35.

The Laser is aimed at the newcomer to computing and, at £69.95, is claimed to be the world's lowest priced colour computer

It has 45 rubber-like keys, 4K of RAM — expandable to 68K — and Microsoft BASIC in the 16K ROM. In text mode it has 32 columns by 16 rows with maximum graphics resolution of 128 by 64. Eight colours are available and there is a single channel sound generator

And, like the Spectrum, it has single keyword entry.

Computers for All, the UK distributors, says a range of software will be available starting in July, along with a printer-plotter at £149.95 using 4½in rolls of plain paper and ballpoint pens, similar to the model marketed by other companies

Also due: a 16K RAM pack at £29.95; joysticks, £19.95 a pair; Centronics printer interface, £19.95; light pen, £19.95; 64K RAM pack, £59.95.

FORTH and another

BASIC are promised for August at £5.95 on cassette

The COMX 35 includes a built-in joystick to the left of the keyboard in its price of £119.95

The 55 keys are similar to those on the Tandy Colour Computer

Unlike the Laser, which uses the popular Z80A processor, the COMX has the less well-known 1802

Although it offers 35K of RAM — hence the name — 3K is used to handle the screen, leaving 32K of user RAM, and 16K of ROM

The COMX comes with 10 programs on a free cassette tape and the manufacturers are working on a plug-in printer interface

● The Laser 200 has a sister, the Zeta, which has 8K of RAM and an estimated price of £89. It is being distributed by a different company, although it is made by the same Hong Kong firm, Video Technology. Both are developments of an earlier computer called the VZ200.

Computers for All, 72 North Street, Romford, Essex

The COMX 35 shown off by Joanna Cox, 27

You could be on our pages

We welcome programs articles and tips from our readers.

PROGRAMS should, if possible, be computer printed to a width of 48 characters (use a new ribbon) and/or sent on cassette. Check carefully that they are bug-free. Include details of what your program does, how it works, variables you have used and hints on conversion.

ARTICLES on using home computers should be no longer than 2,000 words. Don't worry about your writing ability — just try to keep to the style in HCW. Articles most likely to be published will help our readers make better use of their micros by giving useful ideas, possibly with programming examples. We will convert any sketched illustrations into finished artwork.

TIPS are short articles, and brief programming routines which we can put together with others. Your hints can aid other computer users.

Competitive rates are paid.

Keep a copy of your submissions and include an SAE if you want them returned. Label everything clearly and give a daytime and home phone number if you can.

Paul Liptrot, Home Computing Weekly, 145 Charing Cross Road, London WC2H 0EE

"IT LOOKS NICE BUT WHAT THE HELL CAN I DO WITH IT?"

Every ZX SPECTRUM Print'n'Plotter Jotter has 100 pages of finely printed screen grids.

50 for the high resolution screen. 50 for the normal character screen.

With these at your disposal you can plan practically any graphics print out to program into your computer.

The high-resolution PLOT grid shows every one of the 45,060 pixels. Every one printed. Every one with its co-ordinate numbers. This gives you enormous graphics power to DRAW, PLOT, CIRCLE, PLOT OVER and so on in any position or screen building up graphic drawings, charts, maps... In fact anything without the complications of guesswork, integer out of range, or wrongly positioned pixel colours which change PRINTED INK characters!

The normal character PRINT grids on the other hand will allow you to be specific about PRINT AT, TAB, PRINT OVER, SCREENS and INK/PAPER in direct co-ordination with PLOT... you see every page is printed on high quality tracing paper... ideal to overlay on to illustrations and copy or co-ordinate.

And there's another bonus, because each page contains 24 User definable grids — 2400 per pack!

With 50 pages of PLOT grids, 50 pages of PRINT grids 2400 user definable grids, a set of colour pens, a printed PIXEL RULER and our Special Offer of demo programs, IT'S THE BEST VALUE IN ZX GRAPHICS PROGRAMMING.

"NOW WHICH KEY DO I PRESS TO SHOOT DOWN THE THING FROM MARS?"

Ever forgotten which key to press when playing a game? Do you suffer from a mind-boggling mass of programmed keys? Do you write programs that use different keys to perform various functions? If so, we have just the thing for your ZX SPECTRUM.

A pack of Print'n'Plotter Keyboard Overlays.

Just write the function or functions under each key you program and keep the overlay for the next time you play the game. Of course there's lots of more uses you will find for our OVERLAYS, user defined characters, keyboard scanners, mathematical programs, business uses — to name just a few.

There's TEN OVERLAYS to a pack — so you can program with impunity! And they fit perfectly onto your standard ZX SPECTRUM KEYBOARD. Each OVERLAY is printed with the cursor movement key directions and there's room for program name etc.

A SPECTRUM CONSOLE THAT EVERYONE CAN AFFORD!

For the cost of a 'games' cassette you can have a truly professional console for your SPECTRUM!

We've cut costs (not cut quality) by designing a self-assembly method using relatively inexpensive materials like strong corrugated board.

The result is a console that's tough, light, highly finished and capable of giving years of useful service.

Facilities include ergonomic keyboard angle, access to rear of machine, choice of P.S.U. internal or external, and alternative of Printer on-board or cassette storage area. Fully illustrated instructions are included.

"PRINTER PAPER THAT WORKS? I DON'T BELIEVE IT!"

Five rolls of our PRINTER PAPER will only cost you £12.50 including postage, packing and VAT! And you'll gain a great deal more! It prints beautifully, it's not too thick, it's not too shiny, Print is black — not grey. It actually feeds through the machine! See for yourself only £12.50 including everything. It's a bargain!

Post today to Print'n'Plotter Products, 19 Borough High Street, London SE1 9SE or phone 01 403 6644 (General) or 660 7231 (Credit Card Sales).

ADDRESS _____

How's your aim? It could save your life

This game gives the word bomber the meaning it had during World War Two. You must use your bomb aiming skills to destroy the city below before your aircraft loses power and crashes into the high rise buildings.

The program is devised to increase the difficulty as each raid is successfully completed.

The score moves from one game to the next until the inevitable crash occurs as the aircraft runs out of fuel before it has cleared enough space to land.

A version of the classic arcade game, Bomber, written for the Dragon by Ian Sellman

The only operation required is the bomb aim and release mechanism, controlled by the space bar.

You could play it with friends as Bomber is ideal for competitive play.

Dragon Basic — a version of Microsoft — is extremely powerful and the 6809E processor, which is in the class of the BBC for speed, makes this program very hard to convert.

I suggest you completely rewrite the program for your own micro.

Main variables

P(20,10) P1(20,10) arrays containing plane space which house plane
 B(10,10) B1(10,10) arrays containing bomb space which house bombs
 Y, X arrays containing vertical position of plane
 Z amount by which plane was being crashed
 S, SS score
 C CS being bombed
 T being being grow
 B being being grow
 F score of bomb in area
 B being 60000 number of sections of heading to be destroyed each section having one row of window

Hints on conversion

This program would run on a standard on the Dragon Computer. But when converting to other micros, the following points must be taken into account:

- The Dragon has two video channels. You will need to set up a video channel.
- The text screen is 32 by 16. The high resolution is 256 by 96.
- The GET and PUT commands for a powered line are used for the colored graphics.
- PSET is the same as PUT and PSET is the same as PUT.
- On most video cards, the high resolution mode is not available. You will need to be able to use the low resolution mode.

How it runs

Speeds up the Dragon to get a great break, peculiar things will happen to your program.

SPECTRUM SOFTWARE REVIEWS

Games to put across the Spectrum

There are games for all tastes in this selection of new Spectrum releases. Read our reviewers' ratings

Starfire 48K £7.95

Virgin Games, 61/63 Portobello Road, London W11

This is a very good implementation of the standard Star Trek game

Some of the features you might expect are missing — for example no warp factors or impulse engines. Some features that were left something to be desired in the original are kept on, such as the coded long-range scan. Surely the Spectrum's graphics could give a more interesting display?

But the game's good points outweigh any quibbles. The graphics interludes for docking, asteroids storms and time portals (all quite reasonable games in themselves), the combat mode and, in particular, the programmer's slightly sadistic sense of humour made this a very enjoyable game

instructions 90%
playability 85%
graphics 85%
value for money 80%

Spawn of Evil £4.95

DK Tropics Ltd 2, Stone Hill, Justice Estate, Sutton Walden, Essex

One whole side of the tape is devoted to detailed instructions on how to play and setting out the complex breeding cycle of your enemy. Your mission is to hold on where no Spectrum owner has been before to destroy 'EGG' and its progeny

The lengthy instructions may be copied to your printer and on the ZX printer exceed 1 metre long. Careful study of the tutorial is advisable before you go EGG hunting

Your screen shows either a wide range scanner view or a more detailed close up of the battle. There are several realistic features, having to stop for repairs, gains of energy and a good simulation of a space dog

The game has obviously been well thought out and is colorful and exciting to play. But the version I had tended to crash on occasions for no apparent reason

instructions 90%
playability 85%
graphics 85%
value for money 80%

Sheepwalk 48K £7.95

Virgin Games, 61/63 Portobello Road, London W11

A simple idea but a novel, fun and difficult game. You control a sheepdog called Rex (who looks like a black trestle table), whose task it is to herd a number of errant sheep back into their pen. Sheep may be lost in a river, or may wander into crops and eat them. Points are lost for both of these. Rex will also damage crops if he passes through them

I found the control keys too close together for comfort but the more nimble-fingered may have

no problem. There's an option for joystick control, but as the game is mainly in Basic it does not have the speed which makes joysticks a must

Handling Rex is a matter of very precise judgement, quite hard to achieve. But with practice the game might pall — there are no higher skill levels as you get better

instructions 90%
playability 85%
graphics 85%
value for money 80%

Golf £7.95

Virgin Games, 61/63 Portobello Road, London W11

There are golf games and golf games and this is one of the best I've seen. You can select the number of holes (up to eighteen) up to four players and the handicap for each player

Each hole demands choosing one of five clubs, a correct estimate of the direction of the ball and strength of the swing on a scale of 0 to 10

Better use could have been made of the graphics and the layout — current score and position could be more attractive. A

nice touch, however, is the graphic of the player swinging at his ball, and the nice drawn-up of the course to show the route you have taken so far

As an indication of the complexity of the game (or perhaps my golfing ineptitude), on my first hole, a par 3 I took 27 strokes!

instructions 95%
playability 90%
graphics 85%
value for money 90%

Yomp £7.95

Virgin Games, 61/63 Portobello Road, London W11

The first stage of Yomp is really a Frogger variant. Your five paratroopers have to cross four lanes of fast-moving traffic, and when three men are across the second stage begins

Unlike Frogger, there is only traffic to contend with, but the gaps are small, and the four lanes travel at different speeds

The second stage involves using a radar scanner to cross an enemy minefield, in the manner of Mined Out. Movement sen-

sors mean sudden death if you make too many mistakes

Your task is not helped by having a flashing paratrooper — most distracting! The graphics are good, but confusing — you can sometimes escape when you appear to have collided and vice versa

Not too bad but overpriced. You do get two games, but neither is as good as similar games taken separately

SOFTWARE REVIEWS

All systems go... for a look at some action games

Discover who came out best when our reviewers tried to out-zap these versions of arcade favourites

Frogger Commodore 64 £6

Anirog, 26 Balcombe gardens, Horley, Surrey

Anirog's version of the now famous frog splatting game makes splendid use of the Commodore's graphics features. The screen display is really state of the art. You can even see the alligator's teeth!

Due to the length of the program, it takes a long time to load so it's best to make a cup of coffee while you're waiting. Once

the program is running you'll get so hooked that you'll never get round to the coffee.

The instructions are basic and don't tell you that you need to press the space bar to start each game. They say that you get 10 points for moving forward, but I never did. My score remained obstinately at zero during my first 15 or so games until I eventually got a frog home, then I suddenly got the accredited 200 points.

instructions	20%
playability	80%
graphics	90%
value for money	70%

Mushroom Mania 48K Oric £4.50

Arcadia, 4 Sunningdale Avenue, Swansea SA3 5HP

Arcadia's version of Centipede with a fierce spider and Pac Man style character thrown in is absorbing entertainment for one or two players.

Use of the Oric's sound and colour capabilities was excellent, and a record of high scores can be kept.

Points are scored for shooting down the spider and the

mushrooms which are constantly being replaced by tiny and harder manoeuvrable ones of your fire power. There are five skill levels, from fairly easy to almost impossible.

Basically simple Mushroom Mania is addictive enough to prevent eventual boredom and is good value for money too.

instructions	50%
playability	90%
graphics	90%
value for money	80%

Super Glooper/ Frogs 16K ZX81 £4.95

Psion, 2 Huntsworth Mews, Gloucester Place, London NW1

Super Glooper moves around a maze, 'painting' it as he goes, and avoiding the aliens — unless he has picked up a shield which allows him to destroy them. When one maze has been completely painted a more difficult one appears.

The controls for each direction are provided by any key in several blocks which means that

you may position your fingers in any manner you find comfortable.

Frogs is of course Frogger. In this version the poor amphibian has to cross not a road but a river, by jumping from boat to boat — if he falls in, he's had it (although why this would be fatal to a frog I don't see) — and then on to one of the jetties on the far side.

Each jetty can only be used once per game, so take care; as the final column of boats moves from left to right, the jetty on the extreme left is very difficult to reach.

The boats move in alternate columns which travel left and right; once your frog has left the

safety of the riverbank great concentration is required to land him safely on the other side.

I enjoyed 'Frogs' much more than 'Super Glooper' but they are both very adequately produced games, and fun to play if you are not already over-familiar with them. Having two games on one cassette makes for better value too.

instructions	70%
playability	70%
graphics	70%
value for money	60%

Millipede/ Road Runner 16K ZX81 £4.95

Axis, 71 Brookfield Avenue, Loughborough, Leics LE11 3LN

Two arcade games of the shooting variety — but with quite different targets.

Of the two, I liked Road Runner best. It comes in two parts. In the first, you have to shoot down moving fairground-type targets which move from side to side across the screen. If you succeed at this, you have to aim at Road Runner himself. If you hit him he is only stunned,

and will pick himself up and move in the other direction. But beware — his speed will increase.

Millipede is of course a version of Centipede, in which you have to blast away at the segments of a long worm-like beastie zig-zagging its way towards the bottom of the screen. Slower than Road Runner, and needing less skill in timing.

The graphics are not ornate in these games, but movement is fast and smooth, and the controls respond well.

**A NEW SERIES
FOR FIRST
TIME USERS**

These titles are the latest in a new series of books which introduce newcomers to the most widely used micros in the marketplace.

The "Learning to use" series of books assume absolutely no knowledge about computers and the reader is shown even the most fundamental operations such as "switching on" and "loading a program". The books lead the reader through simple programming and then onto graphics, with several programs which show how to achieve pictures and even animation.

The user-friendly approach is consistent throughout the text - not only are program listings clearly shown, but in many cases, a photograph is included to show what the program looks like when actually loaded and run.

The books contain a number of specially written programs which show the full potential of these machines.

READ-OUT

**Sargon 2 Chess
Commodore
£25**

Of course this program is capable of playing chess and playing it to a very high standard, but what else can it do?

Well, to start off with you can see the display as cars in a computer simulation. If you are going to be playing for a long period you can play a full game or set up a particular problem for the computer to work through, or rescue a half-finished game.

You can make moves with a joystick or the keyboard and the program will give a hint as to a good move if requested.

There are seven levels of play with response times from minutes up to several hours. The graphics are good, easily recognisable and little beeps keep sneaky players from missing Sargon's move.

The instruction booklet is comprehensive and well-written, including a basic introduction and chess for complete beginners. It is a very good value for money.

playability	90%
graphics	80%
value for money	75%

**Are
cartridges
really worth
the cash?**

Tom Donald takes a look at some of the offerings you might pick up at your local VIC dealer

**Gorf
Commodore
£25**

The cartridges that squeeze into the pocket of the VIC are actually quite small. I'm strange however that, in a packed in of crazy mutants and demons, while some have barely enough horrible details to cater space invade a reasonably sized chocolate biscuit. Gorf is in the former category.

In four stages they come, first as space invaders, then armed with lasers, then swooping and spiralling out of what we are told is a black hole (who can doubt it?) and finally shattering around in a large rocket while bombarding us hapless earthlings with chunks of asteroid.

This is a very good game

well thought out and carefully presented. As you struggle through the stages you are promoted from cadet upwards and as the Russians discovered at Stalingrad, promotion and the memories of elevated rank motivate fighters to battle with will.

Hogan lies a problem. A person of my acquaintance fractured his joystick while playing this game. What a tale! Let this be a warning to you all. Waggle it around but don't grip it too tightly or you might break it off.

instructions	90%
playability	90%
graphics	95%
value for money	80%

**River Rescue
Thorn-EMI
£25**

To control the cartridges produced by Thorn for the VIC have shown a high standard of attention to detail, none more than this, in which a simple idea that of controlling a boat up a randomly generated river has been developed into an interesting and enjoyable game for one or two players.

The speed and position of the boat are controlled from joystick or keyboard. Obstacles appear in the river and have to be shot out of the way, there are explorers to be picked up from passing jetties.

The large amount of space available means that the program is fun for beginners and skilled joystick players alike.

While programs on cartridge remain as expensive as in previous days, the fact that you can buy a computer for the price of two of these programs, or one hundred and forty two issues of this magazine.

But for those who can afford it this game will be a lasting source of enjoyment.

instructions	95%
playability	90%
graphics	90%
value for money	50%

**Mutant Herd
Thorn-EMI £25**

This is a two stage game and an odd one. Using crossed laser beams, the player shunts great packs of mutant beasts around the screen. There are little mutie killers on the loose as well, and our task is to herd them down burrows where their talent for mayhem may be most effectively expressed.

No bunnies inhabit these burrows rather hideous mutant mothers laying the eggs of a new generation of creeping things. The second part of the game involves the destruction of these eggs and finally the extinction of the egg layer herself.

The game is original and very well presented. If you are yourself a mutant monster with

an unresolved Oedipal complex then playing this game could precipitate a psychiatric crisis, otherwise you will probably have a reasonable amount of fun.

instructions	90%
playability	70%
graphics	90%
value for money	65%

**Omega Race
Commodore
£25**

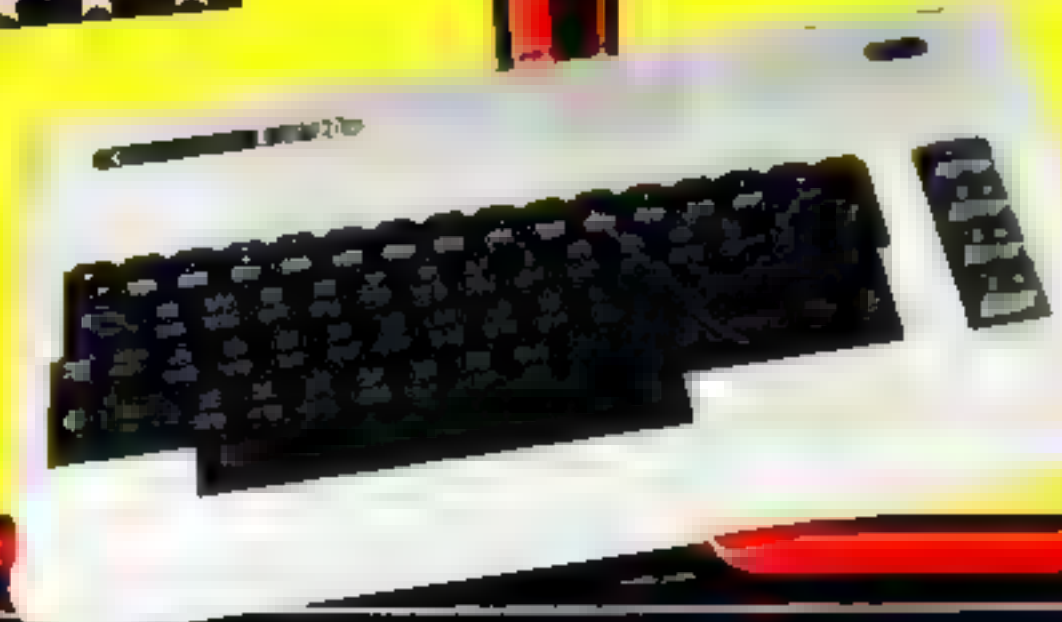

I have played this game more often and with more pleasure than any other game for my Vic. If I tell you that Omega Race is a cross between Asteroids and

snooker, then perhaps it will be clear that this is not an ordinary space invaders clone. Around an enclosed track our little spaceship shuttles, bouncing elastically from the sides, its task to shoot various enemy blobs that pursue it, first shuffling, then at the trot, then bouncing and spinning at full tilt.

Playing colours are selectable (and the sound effects are on a teeny weeny bit tiresome). To describe the graphics would be to risk accusation of understatement.

What more can I say?

It's all new. What we found at the Computer Fair

Shirley Fenton and Richard Cheetham, two 21-year-olds who set up C-Tech after university, launched *Rocket Raider*, a Spectrum space game selling at £5.95. It was written over four months by student Nigel Alderton, 17, and Miss Fenton said: "It should overtake *Arcadia* and *Penetrator* — the graphics are far better than *Arcadia*."

In about a fortnight C-Tech is bringing out another new game, *Knocker Blocker*, priced at £4.95 and also for the Spectrum, in which a character has to knock in nails before monsters catch up with him. The author is another student, David Bryant, 19, who is studying computer science.

Kansas had two new £9.50 adventures for the BBC micro. They are *The Ring of Time* and *Revenge of Zur* — with help given on the phone for players who are stumped.

New Brain owners who write their own software can now get a debugger at £24.50 and a printer screen dump program, costing £14.50, from Kuma.

Primary school headmaster Gordon Askew, 33, has written six educational game programs for the 16K ZX81, for children of five-seven and seven-11. JRS is marketing them as *Edutapes 1, 2 and 3* at £4.95 with two programs on each tape. Each of the cassettes — two for the older age group — use the JRS technique to load in less than a minute.

JRS also brought out three cassettes, each with two games, at £4.95 also for the 16K ZX81 and three at £6.50 each for the Jupiter Ace with 16K expansion.

Sunshine showed the new Dragon version of its *Cruising on Broadway* game.

Imagine gave a first public showing to *Jumping Jack*, a £5.50 game for the Spectrum from Albert Ball, a 36-year-old electrical engineer. Jack tries to climb a multi-storey building, facing

In another show report, Paul Liptrot tells you what you may have missed at the Earls Court Computer Fair

Jumping Jack author Albert Ball with son and helper Stuart, 10 — their game is now out from Imagine

hazards like an octopus, train and an axe. Mr Ball's son Stuart, 10, drew the hazards — and gets a mention on every cassette.

Romik is planning to release two games each for the Lynx, ZX81, Dragon and Spectrum in about a month. And later on there will be tapes for the Commodore 64 and VIC-20.

Space Shuttle, written by a genuine NASA employee, is among a batch of Dragon programs due out from Microdeal on Friday. They are all U.S. imports except one, the company's first from a British author. Steve Bak has written a maze game called *Cuthbert Goes Waukabout*.

The others are *Frogger*, *Golf* and *Morocco Grand Prix*, all at £8, a four-voice sound synthesiser called *The Composer*, £15, and *Tele Tutor*, £25, an educational database to store maths questions. More are due at September's PCW show.

As promised at the Commodore show, Rabbit brought out Spectrum conversions of six of its Commodore 64 and VIC-20 games — *Escape MCP*, *Quackers*, *Phantasia*, *Centropods*, *Race Fun* and *Frogger*. Sales boss John Willan said the firm was aiming for a range of 20 for each of the three computers.

Join a World War One aerial battle with *Dogfight*, at £8.65 for the BBC micro. It is the first of a dozen games from add-on suppliers Opus, said partner Rowland Hoar. *Dogfight* was written by Andrew Hillbig — or "Slogger", as he calls himself on the cassette.

Five games for the Spectrum, VIC-20 and BBC micros are due from Quicksilver in about a fortnight. And in September there will be at least 10 more, said sales boss Rod Cousens. Mysteriously, he added "There are some brand new ideas which we can't discuss at present."

SPECIAL REPORT

Kobra sales director Peter Raybaud said his company was deciding on which Commodore 64 games cartridges to import from Sweden. A database for the 64 on disc, and possibly cartridge, was being brought in from Canada.

Dragon specialists Premier showed its disc system plus four new utilities: HiPrint, at £7.95 or £9.95 for the disc version, which dumps a hi-res screen to the printer; Encoder 09, an assembler/disassembler/editor at £29.95, or £39.95 for cartridge, or £36.95 for disc; Scribe, a £14.95 cassette to give lower case and other features; and Graphics Toolkit, £9.95 or £11.95 for disc, which adds features like 11 new BASIC words and 10 other routines.

New Oric, Spectrum, 32K BBC and TI-99/4A tapes were released by PASE, all costing £4.99. They are, for the Oric, Worm and Machine Code Monitor; for the BBC micro, a version of the Oregon trail game Westquest; Freddy and Munchman, two classics for the Spectrum; and, for the TI, City Blitz/Persac.

Coming soon: three games for the Oric, two for the BBC and a range for the TI-99/4A with Extended BASIC.

Salamander has licensed Gridrunner — written for the VIC-20 by Jeff Minter of Lamasoft — and converted it for the Dragon. It costs £7.95, needs a joystick and features Earth, AD 2190, as a wasteland with the human race's only hope resting with an orbiting power station. Gridrunner is a spaceship with a mission to protect the station from evil droids.

Salamander's two other releases are Franklin's Tomb, a single-player adventure at £9.95, and Everest, costing £7.95, both for the Dragon.

A new low-cost printer is due out in September from dk'tronics — at about £50 cheaper than similar models. Managing director David Heelas and sales boss Peter Brownley are just back from Taiwan, Japan and Hong Kong and examined two printers.

And the one they are most likely to put on sale will be a version of the four-colour printer/plotter — which uses tiny ballpoint pens on 4½-in paper rolls — at present being marketed

Rabbit partner Heather Lamont, 22 — with cuddly mascot

by Tandy, Oric, Micro Peripherals and, most recently, Commodore. Mr Heelas reckons he can sell it for £99.95, including an interface for the Spectrum, because of his lower costs.

dk'tronics showed two new Spectrum games, Invaders at £4.95 and Maziacs at £6.95 for the 48K model, bringing its total to 15. And in the next couple of months, said Mr Heelas, the firm would be adding tapes for the Atari, Dragon, Commodore 64, VIC-20 and BBC to its Spectrum and ZX81 ranges.

A new add-on board for the VIC-20, costing £20.70 from Stack, gives an additional 3K of RAM plus sockets for two 4K EPROMS. The company also had a light pen for the BBC micro, costing £28.75 with a cassette game.

New add-on memory packs were shown by Downsway, best known for its ZX81 RAM packs. They are: 16K for the VIC-20 — switchable for 3K, 8K or 16K operation — 48K and 16K RAM packs for the Jupiter ACE and re-designed RAM packs for the

ZX81 in 64K, now switchable, and 16K versions.

Commuting will never be the same after Trax, a new game at £5.50 for the Spectrum and Commodore 64, by Soft Joe's. Complete with sound, a train chugs around the screen collecting passengers — and trying to avoid the killer train. A VIC-20 version is due out in about a fortnight.

A&F's batch of new games were Oric Painter at £6.90 — a version of its BBC and Spectrum cassette — Swashbucklers, a four-player action game for the Dragon, also costing £6.90, and four for the BBC model B at £8. Bouncer, in which you catch "Beeboids" with an anti-matter scoop; Howzat, a graphic cricket game, and two text adventures, The Shrinking Professor and Horror Castle.

Six games for just £7.50 are being offered by Carnell, which has re-packaged them into a compendium for the 16K ZX81. More games, mainly for the Spectrum, are to be launched by Carnell in September or October. At the

show Carnell held the final of its Volcanic Dungeon competition, to win a holiday for two in Florida, based on its £5 adventure for the 16K ZX81, 48K Spectrum and Dragon.

Turn your 16K ZX81 into a professional class word processor, said Data-Assette, which launched Interact's X-Word in a 16K ROM package. Costing £39.95, it plugs in to offer many of the usual word processing features, including the option of upper and lower case output through an RS-232C interface or the ZX Printer.

Anurog showed 3D Time Trek, at £5.95 for the Commodore 64, along with Miru Kong, a costing £5.95, a new version of its Krazy Kong, re-written to run on the unexpanded VIC-20.

A new deal for 48K Spectrum owners will be offered soon by Spectrum Games, said chairman David Ward. He believes they have been disappointed at games written for both models, so his firm's range is being re-written to make use of the 48K memory — but with the 16K version on the other side.

Spectrum brought out five new titles, all at £5.90, at the show: Kong, Armageddon and Manic for the Spectrum and Rocket Command and Cosmic Intruders for the VIC-20. Due soon are three games each for the Oric, Dragon and Commodore 64.

Mike Meek, managing director of Mikrogen, said his company has holding back its new releases until late August, to catch the Christmas sales. It would then have six new games, mainly for the Spectrum.

A bumper bundle of nine new tapes — five for the Spectrum and four for the 32K BBC micro — was launched by Bug Byte. One of them is General Election, for the Spectrum at £6.95. Sales boss John Phillips explained: "It wasn't that we couldn't get it out in time... the election was called early. She let us down. If you are disappointed with the result — which 56 per cent of the population will be — here's your chance to do something about it."

Bug-Byte's other four new Spectrum games all cost £5.95. They are an undersea game called Aquarius; Styx, described as a combination of a maze game and

SPECIAL REPORT

Frogger, Pool and Manic Miner. Mr Philips described the last one like this: "It's in 16 levels and I think it's going to be the best Spectrum game. It's almost insanely complex."

The BBC tapes are Oblivion and Sea Lord, two arcade games at £7.50, and Old Father Time and Graphics Pack, both at £9.50.

Arcade brought out a game with a familiar-sounding name — Raider of the Lost Mine — along with Grid Run/ Pontoon, both priced at £5.50 for the 48K Spectrum.

Empire is a one-player strategy game for the Dragon at £6.95. Your task is to destroy the evil Dragon empire. Shards, which is marketing it, says the automatic playing feature allows you to "sit back and watch the world being overwhelmed."

Bamby, all the way from the Isle of Harris, brought out new games for four computers. For the Dragon: Scanner 13, costing £8.45, is an arcade-adventure set in a city of the future; Bopswizzle is a "fun game" for £5.95; and

Alien Oddesy (the spelling is correct) is a six-part adventure, with the first two parts on a £9.95 cassette.

For the TI-99/4A: Underground Adventure at £8.45 and two at £6.50 — K 64, a chess-type game, and Alone at Sea, in which you escape from a sinking ship. For the 48K Spectrum Master Code and Mystery Manor, both costing £6.50. And three for the ZX81, all priced at £5.95: Bio-Rhythms, Spelling Tutor and Treasure Island.

Homelink is a new service from the Nottingham Building Society which uses a computer to offer "teleshopping", a magazine, all of Prestel's pages and building society transactions — as long as you have an NBS account.

New generation brought out an action game called Knot in 30 for the 48K Spectrum.

GP Software brought out a version of the LOGO language, priced at £9.95 for the 48K Spectrum, which has easy-to-use graphics and is popular in education because of its simple structure.

Man & Monsters
£6.00

Stainless Software, 10 Alstone Road, Stockport, Cheshire

Perhaps the inflated price includes a bottle of aspirin! The sound at the beginning of the game and when the monsters move is enough to give anyone a headache

You are in a multi-storey building and your task is to paint the floors, while monsters track you down. If you complete the painting without being caught then you can dig holes and lure your pursuers to their death. But be careful not to fall into your

own traps or tumble off ladders or edges of levels.

You have a long supply of oxygen but don't let this fool you — it can run out. A fresh supply of oxygen is given to each of your three men. Arrowed keys control movement and K and L welds your pick-axe to left or right.

There is a long delay between the game segments, and the colour contrast on the replay instruction screen and the score could be better. This is quite an amusing game, if a little slow

playability	70%
graphics	90%
value for money	65%

Where to find arcade action on the TI-99/4A

This week our reviewers look at some arcade favourites adapted for the TI-99/4A.

Dodger Extended Basic
£4.50

Firefly, 48 Dorset Street, London W1H 3FH

You'd better check up on the Green Cross code before attempting Dodger — an adaptation of Frogger. Your objective is to reach home, but you only have three lives with which to do it

To get there you must cross five lanes of traffic, dodge the giant spiders, then swim the river taking care to avoid the crocodiles, speedboats and, finally, the octopus. You have four homes to occupy, and each home may only be entered once

If you do manage to safely find your way to all four homes, there's no sitting back feeling pleased with yourself, for the game starts all over again. This time the pace is even faster!

Movements are controlled from the keyboard — a pity joystick control isn't provided as an optional extra

All the graphics are superb. Even the opening title and instructions are, literally, flashy! Full use has been made of the sprite capability of Extended Basic to provide action every bit as exciting and addictive as the arcade original.

instructions	90%
playability	100%
graphics	100%
value for money	100%

Wonkapillar
£6.00

PS Software from Stainless Software, 10 Alstone Road, Stockport, Cheshire SK4 5AH

You are the Wonkapillar, trying to escape from a series of mazes. But a few new twists make this slightly different from the other maze games on the market

You start out inside a square maze, and the only means of escape is to blow yourself out with a time bomb. But don't set the fuse too short, or you'll blow yourself up as well

As you travel about the mazes, you leave segments of your body behind. Collide with one of these or the wall of the maze, and you're a dead Wonkapillar. At least there are

no ghosts or other nasties to look out for

You get a score for getting through each part of the maze, and also for passing over pieces of fruit lying around at various locations. Reach the end of one maze and you find yourself in the centre of a second one, up to a total of eight. Reach the end of that, and you might find your name in the high score table

You can use the direction keys to move around or change them to the keys of your choice at the beginning of the game

instructions	D.B.
playability	60%
graphics	60%
value for money	50%

North Sea
£3.50

Christine Computing, 6 Florence Close, Watford, Herts

An arcade game in which your task is to sink supply ships moving from left to right across the top of the screen

To do this, you must first manoeuvre your gun under the ship before firing. The computer keeps count of how many ships you sink and how many escape.

Because the game is written in TI Basic, play is very uneven — for example, all movement stops while your bullet moves up the screen.

The limitations of the programming language mean

that the game inevitably lacks excitement, though it is well written and well error-trapped

Best for software — every week

Mr. Chip SOFTWARE

VIC 20 GAMES AND UTILITIES

BUGSY (Joystick Only)

You are in a minefield collect all the yellow bombs before the time runs out by moving on the blue stepping stones. Gain extra time and score by collecting the purple boxes but watch out for the mines marked with red cross bones. Sounds easy? Every stone you step on disappears as you make ground the screen you leave an empty trail, but not to worry, a lovable little green creature called BUGSY moves around randomly filling in the empty spaces but run into him and he turns nasty and you're dead. Clear the screen and another appears with more mines. How long can you stay alive? A very original, compulsive and challenging game.

JACKPOT - Own your own fruit machine, just like the real thing, with nudge, hold and re-spin, can you win the jackpot? You will be amazed by the graphics, colour's and many sound effects, with nine different tunes, a full machine code program, a very compulsive game. £5.50

SWAG-MAN - (3K expansion)

Chase the bullock van around the streets of New York picking up the swag but beware you must defuse the time bombs to gain extra time and extra colour and sound effects, a very original game. £5.50

MINI ROULETTE - PONTOON - HIGHLOW

Three great games of chance for the VIC, try to beat the computer hours of fun, full colour, sound effects and tunes. £5.50

DATABASE - create your own files and records on tape

£7.50

BANK MANAGER - Computerise your bank account

£5.00

SUPER BANK MANAGER - A full feature version any memory size but needs 3K expansion. £7.50

M/C SOFT - Machine code Monitor and Disassembler any memory size. £7.50

COMMODORE 64 GAMES AND UTILITIES

LUNAR RESCUE - Our own version of that popular arcade game. £7.50

PONTOON - ROULETTE - ACE'S HIGH

More powerful versions make three great games of chance for the 64. £7.50

M/C SOFT 64 - Assembler and Disassembler, with decimal hex converter everything our program for the VIC will do and more. £7.50

BANK MANAGER 64 - As our Super Bank Manager, but for the 64. £7.50

Full documentation with all utility programs

Other software available for the VIC and Commodore 64, send for free brochure, including **RABBIT SOFTWARE** for the VIC, at our Special Offer of £7.50 each or buy two or more at £7.00.

Will Rabbit run and run?

Rabbit is one of the better-known names in software for the VIC-20, and the company has been around since the VIC's arrival in the UK. But it started as just a sideline for Cream Computers, a computer shop specialising in business microcomputers.

One of the Cream's employees wrote software, so the company thought it might be a good idea to try and sell a few games by mail order, under the Rabbit label. Ads were placed in the computer press in the summer of 1981.

The orders started to come in and then, just before Christmas that year, Rabbit really started to take off, along with a surge of interest in the VIC. That Christmas Eve, Cream Computers had a consignment of

Rabbit is a veteran company by the standards of the home computer software market. How did it first spot the potential in programs, and where does it go from here? Candice Goodwin reports

VICs and, according to Terry Grant, "we had people queuing up outside the door. We did £10,000 worth of business in two hours."

From being a sideline, Rabbit has now overtaken Cream. The success of the mail-order business resulted in a decision to go into retail outlets, and it was then that the programs were dressed up in the distinctive red packs that many VIC owners will know and love. But Rabbit still wasn't sure what direction its software would take.

If you look closely at a Rabbit retail display you'll see that there are actually two different rabbits — a "semi-serious" rabbit on the cassette boxes and a cartoon rabbit on the stand. The

serious rabbit was designed in the days when the company was hedging its bets between business and games software, and wanted a logo that would do for either. But the cartoon bunny reflects its decision to go for games.

Rabbit now has a large range of action games for the VIC-20 and some for the Commodore 64. It has just brought out 14 new games, at a new lower price of £5.99. And by the time you read this, it will probably have launched some Spectrum programs too.

The programs are sold mainly through retail outlets: Currys, Laskys "and all good dealers — a good dealer in our opinion being one that stocks Rabbit software."

It also has distributors in

Some of the faces of Rabbit. From left to right, top row: Lorraine Hague, Terry Grant, Tania Laufer, Tracy Braxton. Bottom row: Lisa Fitzpatrick and Stuart Barnes

Norway, Sweden, Denmark, Canada, Australia, Iceland, USA and Greece

The company is sticking to arcade-type games "because they sell." But it doesn't believe in sticking to the old favourites. "You have to bring out different ones all the time — all our games are completely different."

Rabbit did once try its hand at adventure games, but the experiment was not a success. Not because the games didn't sell. Terry recalled: "we kept getting phone calls from people who'd

got stuck at some stage of the game and wanted us to get them out. It started to get a bit out of hand." The adventure games are still around, but the company tries to keep their existence very quiet.

Rabbit's games aren't usually written in-house. Its programmer Stuart Barnes spends most of his time putting the finishing touches to submitted programs, adding in title pages and joystick control.

Rabbit used to do all its own duplicating, with 40 tape decks connected up to one VIC. Now it uses a duplicating company. But plans are in progress to set up its own data duplication facility in Speke, Liverpool. The company has already bought a winding machine, a mastering and a duplicating machine, which are sitting in the offices at 380 Station Road, Harrow, waiting for the move up north.

With the aid of its new duplication facility, Rabbit will presumably be able to run even faster. Which reminds me — where did it get that name?

Apparently, it came from Rabbit director Heather Lamont's toy rabbit Roland, but there's some dispute between the two directors over whose idea it was to use it. Said Terry: "Heather says it was her idea. Alan Savage says it was his idea. They both say it was their best idea ever."

Whoever the idea came from, it's certainly a name that sticks in your mind. So it's only fair that by way of recognition, Roland should now be the company's mascot.

HAVE YOU EVER HAD THAT DREAM OR EVER WISHED THAT YOU HAD "WON ON THE POOLS" – AT LAST YOU CAN TURN IT INTO REALITY

THERE IS A SECRET OF "HOW TO WIN ON THE FOOTBALL POOLS" – IT CAN BE DONE. I DISCOVERED THE SECRET A LONG TIME AGO – NOW, FOR THE FIRST TIME I'M PREPARED TO SHARE IT WITH YOU.

HOW DOES THIS INTEREST YOU – I HAVE DOCUMENTARY EVIDENCE BY WAY OF POOLS WINNINGS DIVIDEND SLIPS/CANCELLED CHEQUES, etc, SHOWING MY PRESENT WINS ON THE POOLS AS FOLLOWS:

FIRST DIVIDENDS	SECOND DIVIDENDS	THIRD DIVIDENDS	FOURTH DIVIDENDS	FIFTH DIVIDENDS	SIXTH DIVIS.
765	1,818	2,942	1,952	631	93

A GRAND TOTAL OF 8,201 (EIGHT THOUSAND, TWO HUNDRED AND ONE DIVIDENDS – so far).

I HOLD THE UNCHALLENGED WORLD'S RECORD FOR POOLS WINS.

I AM MAKING THIS VERY SPECIAL REDUCED OFFER TO READERS OF HOME COMPUTING WEEKLY FOR A LIMITED PERIOD ONLY

Do not let anyone tell you that it is impossible to "WIN ON THE POOLS" – since I perfected my method, I HAVE won REGULARLY for over TWENTY-FIVE YEARS – proof that it is not a flash in the pan

I have CHALLENGED THE WORLD with my record of wins and with all the evidence that I possess – NO ONE has ever been able to accept the Challenge – I KNOW NO ONE EVER WILL MY SYSTEM IS THE GREATEST TREBLE CHANCE WINNER IN THE HISTORY OF FOOTBALL POOLS – IT WILL LAST FOREVER – BOTH FOR ENGLISH AND AUSTRALIAN FOOTBALL POOLS, WITH EQUAL SUCCESS

I now intend to give a limited number of people the opportunity of making use of my method – perfected over 25 years and proving itself on EVERY ONE OF THOSE TWENTY-FIVE YEARS You will have noted details of my Personal achievements so far, as given to you above A GRAND TOTAL OF 8 201 yes 8 201 POOLS DIVIDENDS, including 765 FIRST DIVIDENDS My Pools Winnings Dividend slips now number so many that they fill a very large suitcase and will stand as my evidence of all claims in ANY COURT OF LAW IN THE WHOLE WORLD

Taking just the past 25 years into consideration, I have won ON AVERAGE over 328 (THREE HUNDRED AND TWENTY EIGHT) Pools Dividends EVERY YEAR – or AN AVERAGE of over SIX DIVIDENDS EVERY WEEK for TWENTY-FIVE YEARS

You have my absolute Guarantee of the complete authenticity of every claim, cheque, document, letter, etc. contained herein I do have losing weeks, but ON AVERAGE my

winnings show over SIX DIVIDENDS EVERY WEEK for the past 25 years

I know that you are now utterly flabbergasted, it always happens to everyone with whom I come into contact Please just sit back and imagine for a moment my FIRST DIVIDEND wins alone – they now number 765 (seven hundred and sixty-five) and will probably be even more by the time this advertisement appears in print I AM NUMBER ONE IN THE WORLD AND NO ONE DISPUTES IT

For as long as I continue to enter the Football Pools my wins will continue, as I've said with equal success during both Australian and English Football I intend to release a STRICTLY LIMITED NUMBER of copies of my method – DO NOT DELAY AND FIND YOU ARE TOO LATE in which case I would have no regrets

I am so confident of YOUR success that if you do NOT win at least THREE FIRST TREBLE CHANCE DIVIDENDS in the first 20 weeks of entering, I will completely cancel the balance of the purchase price and you do not have to pay me another penny, at any time – no matter how vast your winnings

I only wish that space would allow me to give you photographs of my winnings slips, cancelled cheques, etc. but it is of course impossible – they now number, 8 201 dividends I have however given JUST A FEW EXTRACTS from ORIGINAL LETTERS I hold from my small clientele

I am the inventor and Sole Proprietor of my method Registered as EUREKA – (I have found it) I am known as the Professor in Pools Circles I am of the highest Rank in Forecasting – this is beyond dispute I am marketing a limited number of copies under my registered Company – FOOTBALL ENTERPRISES My initial charge for a copy was £75, but for this

SPECIAL REDUCED PRICE OFFER I will send you a copy for £20 (twenty pounds) ONLY, plus your Promise to pay me the balance of £55 – ONLY IF YOU WIN AT LEAST THREE FIRST TREBLE CHANCE DIVIDENDS IN YOUR FIRST 20 WEEKS OF ENTERING – otherwise you owe me NOTHING FURTHER This is surely proof absolute of my supreme and utter confidence in my own abilities and in the capabilities of my discovery

My method is WORLD COPYRIGHT any infringement and immediate proceedings will be taken, without prior warning It is truly ingenious and has stood the test of time It is simplicity itself to calculate weekly Your entry need not involve you in any large weekly stakes, you can enter for as little as just 25p if you wish I charge NO COMMISSION on any of your wins – no matter how BIG they may be I realised a long time ago that I was too busy sitting down and dreaming about winning the pools, so I burnt the candle at both ends, working late into the night, occasionally RIGHT THROUGH THE NIGHT, I KNEW there was a way, eventually it all paid off and has been doing so ever since

I am unable to vary my offer to anyone, so please do not request it, as I shall very easily dispose of the limited number of copies I am making available

IMMEDIATELY I perfected my method I commenced winning right away, (I first win just a little £163 the first week I used it), I HAVE NEVER LOOKED BACK SINCE, amongst all those dividends was one for over EIGHT THOUSAND POUNDS for just one eighth of a panny stake I will release a copy of my method to you on receipt of the completed order form and your Signature thereon, confirming you will treat it in the STRICTEST CONFIDENCE between us and retain it for your OWN USE ONLY

I am unable to vary my offer to anyone, so please do not request it, as I shall very easily dispose of the limited number of copies I am making available

IMMEDIATELY I perfected my method I commenced winning right away, (I first win just a little £163 the first week I used it), I HAVE NEVER LOOKED BACK SINCE, amongst all those dividends was one for over EIGHT THOUSAND POUNDS for just one eighth of a panny stake I will release a copy of my method to you on receipt of the completed order form and your Signature thereon, confirming you will treat it in the STRICTEST CONFIDENCE between us and retain it for your OWN USE ONLY

Don't take MY word for it, read what people write about me and my method I won on Zelters last weekend. It was not a big sum, but at the same time it was a very nice surprise for me. J.C., Lancs

I appreciate the straightforward method you adopt, which is such a contrast to the rubbish of misrepresentation which is so common in the Betting World, by unscrupulous and self-opinionated charlatans. C.H., Devon

Winnings cheque received today sincere thanks D.N. Devon

I congratulate you on your achievement R.R. Wales

I should like to thank you for a most exciting season and look forward to hearing from you again J.C., Hants

I would like to acknowledge cheque and say how much I appreciate your integrity J.M. Scotland Many thanks for your system. It is as you say and more J.C., Lancs

Your wonderful system won me £3 527 I intend to visit London soon and will be able to come and see you personally (Overseas Client) P.M. Kempala

I am very interested indeed and enclose £20 herewith I agree to pay you the balance of £55 ONLY if I win at least THREE FIRST TREBLE CHANCE DIVIDENDS in my first 20 weeks of entering – otherwise I owe you NOTHING FURTHER at any time – no matter how much money I win My signature below is my Undertaking to retain complete and absolute confidence about the method

The Managing Director
Football Enterprises, Anvon
9 New Road Haverfordwest,
Pembro SA61 1TU

Many thanks for trying so hard to please us all your brother should be thanked also. One of our daughters, whose husband you helped enormously has just phoned, the four of them have just spent a wonderful holiday in Spain K.R., Isle of Man

I sent in my FIRST entry last week and won 2nd and 3rd dividends, as you will see from the enclosed certificate. One more and I would have collected over £400 for FIRST dividend. Once

I've won a fair amount I shall be staking from winnings and 2p per line, a FIRST dividend last week at this would have been over £3 000 C.A., Yorks

MAIL ORDER PROTECTION SCHEME

If you order goods from Mail Order Advertisers in this magazine and pay by post in advance of delivery, this publication will consider you for compensation if the advertiser should become insolvent or bankrupt, provided:

1. You have not received the goods or had your money returned; and
2. You write to the publisher of this publication explaining the position not earlier than 28 days from the day you sent your order and not later than 2 months from that day.

Please do not wait until the last moment to inform us. When you write, we will tell you how to make your claim and what evidence of payment is required.

We guarantee to meet claims from readers made in accordance with the above procedure as soon as possible after the advertiser has been declared bankrupt or insolvent to a limit of £1,800 per annum for any one advertiser, so affected, and up to £5,400 p.a. in respect of all insolvent advertisers. Claims may be paid for higher amounts, or when the above procedures have not been complied with, at the discretion of this publication, but we do not guarantee to do so in view of the need to set some limit to this commitment and to learn quickly of reader's difficulties.

This guarantee covers only advance payment sent in direct response to an advertisement in this magazine (not, for example, payments made in response to catalogues, etc. received as a result of answering such advertisements);

CLASSIFIED ADVERTISEMENTS ARE EXCLUDED.

PSSST for 16 or
 48K SPECTRUM

Little vermin, leave my plant alone. Ovi! My plant's sucking the life from my making her stink. Churnamoddi! Must die. It's got to wilt and die. I'll take that and that. Hai Hai. Mustn't die. Five minutes to grow. It can't be much longer. The leach laser. Quick. Quick. They breed so fast, can't hold them back for long. Hurry! Hurry! Arrrrrr!

PSSST . . . The ULTIMATE Challenge. code, incredible sound effects, 100% machine smooth high resolution visual graphics and that totally new addictive concept. and all those features you come to expect from the ULTIMATE GAME. Now you know why 'ULTIMATE PLAY THE GAME' design: 'ULTIMATE PLAY THE GAME'

 PLAY THE GAME

JET PAC FOR 16 or 48K SPECTRUM

The 'Acme Interstellar Transport Company' is delivering spaceship kits to various planets throughout the Galaxy, and as chief test pilot, all you have to do is assemble the rockets and thrust onto your next destination. But as you don't often get the chance of a free trip across the Galaxy and space travel is on, so expensive, now's your chance to get rich! You might just find and take them back with you. Upon landing, you will find your meppa powered with the elements of gold, plus meppa equipped with the very latest JET PAC, plus meppa powered with the photon laser phasers, to blast any nasty, mean, little aliens who might object to your visit. And my! do those aliens get upset when you collect all of their valuables, and sneak off, without so much as a by-your-leave.

JET PAC Arcade standard, 100% machine code, incredible sound effects, amazing smooth high resolution visual graphics, the totally new addictive concept and all those extra features you expect from the ULTIMATE GAME. Now you know why 'ULTIMATE PLAY THE GAME' design: 'ULTIMATE PLAY THE GAME'
